

## Nano4Design Workshop 'Nano-enhanced Textiles'

28<sup>th</sup> February 2012, Nanoforce, London

### Background

Textiles are an important part of our everyday lives –whether for functional or high-end clothing, or in hidden technical applications such as polymer composites, filtration membranes and architecture.

Nanotechnology can enable coatings for fibres and fabrics to impart properties such as waterproofing, easy-clean, UV resistance, anti-microbial and colour effects.

### The Event

This event is the second Nano4Design event following the highly successful launch event Nano4Sport. It aims to bring together product designers with nanotechnology companies to exchange information, raise awareness of consumer and market needs, and to flag up new technological developments.

Hosted by Nanoforce, an innovative leader in nano-enabled polymers and materials, this event features a keynote presentation by Prof Ton Peijs, Technical Director, Polymers at Nanoforce and Professor of Materials at Queen Mary University of London.

### Registration

A discounted rate of £50 + VAT will be charged to members of the NanoKTN\* and supporting organisations. The standard cost is £70 + VAT.

Organisations and individuals wishing to attend should email a completed registration form to: [Natasha.taylor@nanoktn.com](mailto:Natasha.taylor@nanoktn.com).

*\*Membership to the NanoKTN is free of charge. Register online at [www.nanoktn.com](http://www.nanoktn.com)*
